Art Unit: 1724

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim 1 drawn to a method.

Group II, claims 2-9, drawn to a reactor.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, a special technical feature which these claims share does not define a contribution over the prior art. For example, the claims of Groups I and II share a reactor as the special technical feature, which is considered to lack novelty or an inventive step in view of Plester et al. 5,858,248 (see col. 4 line8 through col. 7 line 15).

During a telephone conversation with Fiona Ferguson Reg. No. 52,885 on 9/7/07 a provisional election was made without traverse to prosecute the invention of Group I, claim 1. Affirmation of this election must be made by applicant in replying to this Office action. Claims 2-9 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

The disclosure is objected to because of the following informalities: In the specification on page 1 "the preamble of claim 1" and on page 2 "the process characterized in claim 1...claim 2" should be deleted.

Appropriate correction is required.

Art Unit: 1724

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1 "which can also", "elevated", "discharged through the water" are vague and indefinite because it is unclear how these terms further limit the claims. In claim 1 "the water flow", "the resulting lime and fouling elements", and "the heating surfaces" lack clear antecedent basis.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Clarkson 2,775,555 in view of Miller et al. 3,393,804. Clarkson et al. appears to disclose (see col. 3 line 39 through col. 6 line 73) a process for deliming water and removing pollutants substantially as claimed. It is submitted that the scale collecting surfaces disclosed in Clarkson et al. are considered patentably indistinguishable from the plates recited in the instant claim. The claim differs from Clarkson by reciting a step for gassing the water by means of air introduction. Miller et al. disclose (see col. 3 line 15 through col. 5 line 65) that it is known in the art to heat water in a reaction compartment of a settling tank to aid in precipitating scale forming contaminants, and to vent air to the reaction compartment, to aid in removing excess gas including carbon dioxide from the tank. It would have been obvious to one skilled in the art to

Art Unit: 1724

modify the process of Clarkson by including the recited step for air introduction in view of the teachings of Miller et al., to aid in removing carbon dioxide from the reaction chamber.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter A. Hruskoci whose telephone number is (571) 272-1160. The examiner can normally be reached on Monday through Friday from 8:00AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on (571) 272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
